Session 2

Products and Systems in Louisiana

Common Installation Procedures

Repair or Upgrade?

Hands-on Experience from Manufacturers

Training Objectives

This 2-Day Guardrail Installer Training provides information necessary for installing, maintaining or inspecting barriers geared for contractors and inspectors that do work in the state of Louisiana.

On Day 1—In a classroom setting, participants will understand:

- The need for traffic barriers at specific locations
- The basics of barrier testing requirements and performance characteristics
- Commonly used installation procedures to ensure optimal crash performance
- When a barrier needs to be repaired, replaced or upgraded
- How to efficiently and effectively repair or replace barrier

Materials presented are specific to Louisiana and references will be made to LADOTD's standards, specifications and manuals.

Hands-On Experience

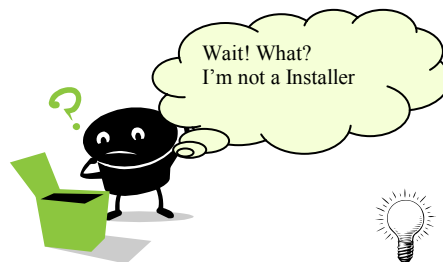

On Day 2— Manufacturers will present their products with crash test videos, installation procedures and hands-on experience on the products used in Louisiana. This is the only place you can have all the manufacturers together at one time allowing you to interact with all of them. You will receive materials on their products and learn from the experts.

August 15–16, 2012
8:00 a.m. to 4:00 p.m.
